

Handbook

Every row below jumps to its chapter. The viewer's bookmark panel shows the same tree.

1. Installation	jump
2. Authoring a document	jump
3. Shipping to production	jump

The whole box is a link - opens the repository on GitHub.

1. Installation

Install the package with your usual package manager. jasy ships as pure ESM and needs no headless browser, no Java runtime and no native binary, so a cold install is measured in seconds.

Read the full documentation at jasy.dev, or return to the [table of contents](#).

2. Authoring a document

A document is a tree of components. Columns and rows stack, boxes frame, and text flows. When the content outgrows a page, jasy paginates it for you and reprints the header and footer.

Read the full documentation at jasy.dev, or return to the [table of contents](#).

3. Shipping to production

Render on a server, in a serverless function, or entirely in the browser - the engine is isomorphic. Attach a ZUGFeRD invoice, tag the document for accessibility, or encrypt it with AES-256.

Read the full documentation at jasy.dev, or return to the [table of contents](#).
